Links {#Sec1} ===== \*\*K'ed by .\*\* . Booms {#Sec2} There is no word for the city that does not also carry the word boom. It is so much part of our lives that we barely think about it. The word boom in its original form can be traced back to the Latin \*boma\*, a type of cattle pen built during the First Dynasty in Egypt. When the Pharaohs of Egypt started building new cities, they usually build walls around these cities to keep outsiders out. The walls served multiple purposes including the preservation of the city's identity and the protection of the citizens from harmful animals and insects. These walls were originally constructed of mud-brick, and the city was surrounded by a moat. Eventually, the moat disappeared and the city became surrounded by walls made of stone. We are not talking about the moat. For most of us the word boom as we know it from San Francisco or New York is not the original sense of the word. Booms are brought about by technological innovations. As these innovations spread, new industries are created and industries that existed previously are either absorbed or shut down. When this happens the decline of a city is accompanied by its name being changed to something else. To understand what a boom is and how it works, we first need to define a few terms. There are two types of booms, a business boom and an economic boom. A business boom is when a business starts to gain market share. The business becomes better known, as it begins to spread its wings and capture a larger market share. A city may also be classified as a boom town because it experiences a growth spurt. For example, St. Louis was once a great riverboat port. In 1876, it was declared the fourth largest city in the United States. In 1979, it was declared the fastest growing city in the United States. An economic boom occurs when one industry increases in size. What is normally an industry in one location can be a service industry in another. For example, because of technological innovations, the economy of New York City is quite a bit different than that of St. Louis. It is a much larger city, and its economy is dominated by the financial sector, which is a large percentage of the city's economy. Another characteristic of a boom is that it can 82157476af
